

FACILITATOR Facilitator - 2011 **Veel vluchtelingenkampen bestaan meer dan 10 jaar. We hebben een tent ontworpen die die zeer gemakkelijk is op te zetten. Licht, sterk, stabiel, flexibel, aanpasbaar en goedkoop. De tenten kunnen onderling worden verbonden en gegroepeerd in sociale clusters.**
 Many temporary disaster shelter camps exist for over 10 years. We designed a tent that needs least effort to erect and that has the strongest shape. It is very light, strong, stable, flexible, adaptable and cheap and can be linked and grouped in various clusters of social coherence.

camp lay-out development: from generic (top left) to organic constellations (bottom) with many more social interactions. Each cluster of tents can have one or more service tent(s).

- section of facilitator (dimensions in meters)**
1. membrane (< 700 gr/m²)
 2. reinforced bottom membrane (700 gr/m²)
 3. spring steel meridians are lateral pre-stressing the membrane
 4. membrane partitions with zipper openings
 5. inclined top
 6. space for rainwater collector and/or antenna devices
