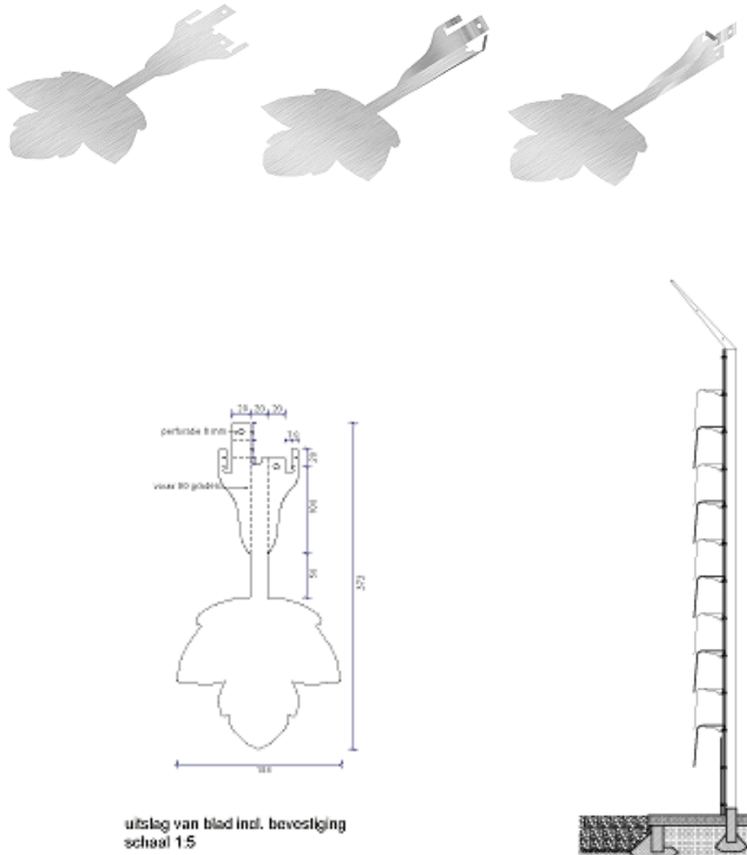
S K I N **(2e prijs)** **Een huid van bladeren bedekt het hek van een 380 KV Tennet grondstation in Delft. De bladeren zijn lasergesneden uit gepolijst verenstaal en bevestigd met slechts 1 popnagel. De doorsnede voorkomt metaalmoeheid. De bladeren reageren interactief op de wind.**
S K I N - 2013 (2nd prize) A skin of leaves upgrades an electric transformer station fence near the town of Delft. The leaves of polished spring steel are laser cut, bent and attached with one rivet only. The section avoids matal fatigue. The leaves respond to the wind which results in an interactive live skin.



uitslag van blad incl. bevestiging
